

### Key concepts and questions

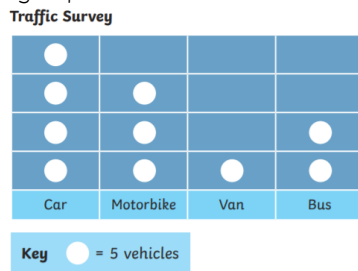

#### What is data?

Data is information that can be collected on any topic and then represented in a graph or table, such as a pictogram, tally chart or block diagram.

#### What is a key?

A key tells us what something represents.

Here, each dot represents 5 vehicles.  
There are 4 dots for the car.  
 $4 \times 5 = 20$ .  
There were 20 cars.

### Key Vocabulary

Tally

Tally marks look like this, the fifth one goes across like a gate.

Key	Shows what is represented. For example,  = 6 cupcakes
Most	The highest number
Least	The smallest number
Equal	The same
Total	How many altogether

### Representations

#### Tally Chart

Favourite vegetables.

Vegetable	Tally	Number
Lettuce		17
Broccoli		12
Cabbage		21
Brussels Sprouts		6

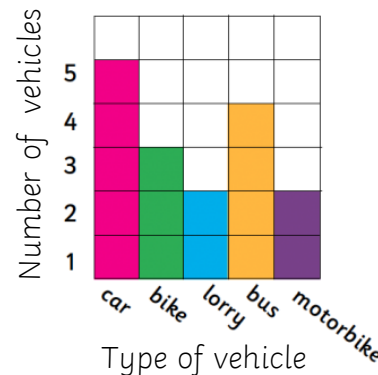

#### Pictogram

Number of cupcakes sold.

#### Block Diagram

Number of vehicles.

### Making connections

#### Counting in 5s

Lettuce		17
---------	--	----

You don't have to count each tally line individually. You can go 5, 10, 15, then add the 2.

#### Counting in 2s, 5s and 10s

Intervals on a scale don't always increase by 1, you may find some going up in 2s, 5s or 10s.
